## Power Relay MM

## Stable Contact Reliability and Long Life

- Easy to mount, wire, and use.
- A large selection of models including various contact forms, DC-switching models, and open models.
- Mechanical life: 5,000,000 operations; electrical life (under rated load): 500,000 operations.
- Models also available with built-in diodes and for use as auxiliary power relays.

Refer to Safety Precautions for All Relays.

## Ordering Information

| Type | Contact form | Open structure |  | Cased |
| :---: | :---: | :---: | :---: | :---: |

## Models Conforming to Auxiliary Power Relay Specifications

The MM4P-JD and MM4XP-JD satisfy the ratings of auxiliary relays provided in JEC-2500 (1987) standards for power protective relays specified by the Japan Electromechanical Commission. Furthermore, the MM4P-JD and MM4XP-JD satisfy the ratings of multi-contact relays provided in JEC-174D (1979) standards for power auxiliary relays.
These models work at operation level B specified by JEC-174D (1979) standards and the hot start of the relays is possible after the coils radiate heat.

In accordance with JEC-2500 (1987) standards, the coil of each model withstands a 130\% DC load or 115\% AC load.
Note: 1. When ordering, add the rated coil voltage to the model number. Rated coil voltages are given in the coil ratings table. Example:MM2, 6 VAC
2. Latching Relays based on the MM Series are also available. Refer to the MMK.
3. Models with built-in varistors (AC operation) are also available in addition to those with built-in diodes. Ask your OMRON representative for details.

Note: 1. The rated current and coil resistance are measured at a coil temperature of $23^{\circ} \mathrm{C}$ with tolerances of $+15 \% /-20 \%$ for AC rated current and $\pm 15 \%$ for DC coil resistance.
2. The AC coil resistance values are reference values.
3. Performance characteristic data are measured at a coil temperature of $23^{\circ} \mathrm{C}$.
4. The maximum voltage is one that is applicable instantaneously to the Relay coil at an ambient temperature of $23^{\circ} \mathrm{C}$ and not continuously.

## Cased Coils (Plug-in Terminals)

The rated current may vary if the Relay has a built-in operating indicator (See note 4.).

Note: 1. The rated current and coil resistance are measured at a coil temperature of $23^{\circ} \mathrm{C}$ with tolerances of $+15 \% /-20 \%$ for AC rated current and $\pm 15 \%$ for DC coil resistance.
2. The AC coil resistance and coil inductance values are for reference only.
3. Performance characteristic data are measured at a coil temperature of $23^{\circ} \mathrm{C}$.
4. The maximum voltage is one that is applicable instantaneously to the Relay coil at an ambient temperature of $23^{\circ} \mathrm{C}$ and not continuously.
5. The rated current of a model with a built-in LED indicator at $6,12,24$, or 50 VAC or $6,12,24$, or 48 VDC increases by approx. 10 mA due to the current consumption of the LED. The rated current of a model with a built-in neon lamp indicator at $100 /(110)$ or $200 /(220) \mathrm{VAC}$ or 100/110 or 200/220 VDC increases by approx. 0.2 mA due to the current consumption of the neon lamp.

| Contact type | Single |  |  |  |
| Contact material | Ag |  |  |  |
| Rated load | 10 A at 110 VDC | 7 A at 110 VDC | 7 A at 110 VDC | 6 A at 110 VDC |
| Rated carry current | 15 A |  | 7.5 A |  |
| Max. switching voltage | 250 VAC, 250 VDC |  | 250 VAC, 250 VDC |  |
| Max. switching current | 15 A |  | 7.5 A |  |
| Max. switching power (reference value) | 1,200 W at 20 VA | 800 W at 20 VA | 800 W at 20 VA | 660 W at 20 VA |
| Minimum permissible load (reference value) (See note 3.) | 5 VDC at 10 mA |  |  |  |

Note: 1. When switching DC inductive loads at 125 V or more, an unstable region exists for a contact current of between 0.5 and 2.5 A . The Relay will not turn OFF in this region. Use a contact current of 0.5 A or less when switching 125 VDC or more.
2. If $L / R$ exceeds 7 ms when switching $D C$ inductive loads, an arc-breaking time of up to 50 ms must be considered in application and the circuit must be designed to ensure that an arc-breaking time of 50 ms is not exceeded.
3. This value is measured at 60 operations $/ \mathrm{min}$.

## Contacts (Conforming to Auxiliary Power Relay Specifications)

| Item | MM4P-JD |  | MM4XP-JD |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Resistive load | $\begin{gathered} \text { Inductive load } \\ (\cos \varphi=0.4, \mathrm{~L} / \mathrm{R}=7 \mathrm{~ms}) \end{gathered}$ | Resistive load | Inductive load $(\cos \varphi=0.4, \mathrm{~L} / \mathrm{R}=7 \mathrm{~ms})$ |
| Contact type | Single |  |  |  |
| Contact material | Ag |  |  |  |
| Rated load | 5 A at 220 VAC, 5 A at 24 VDC |  | 5 A at 110 VDC |  |
| Rated carry current | 5 A |  |  |  |
| Max. switching voltage | 250 VAC, 250 VDC |  |  |  |
| Max. switching current | 5 A |  |  |  |
| Max. switching power (reference value) | 1,100 VA, $120 \mathrm{~W}, 30 \mathrm{~W}(\mathrm{~L} / \mathrm{R}=40 \mathrm{~ms})$ |  | $20 \mathrm{VA}, 550 \mathrm{~W}, 40 \mathrm{~W}(\mathrm{~L} / \mathrm{R}=40 \mathrm{~ms})$ |  |

Note: 1. A model for DC loads is not in stable operation when switching an inductive load within a operating current range between 0.5 and 2.5 A at a minimum of 125 VDC , where the load cannot be switched.
2. If $\mathrm{L} / \mathrm{R}$ exceeds 7 ms when switching $D C$ inductive loads, an arc-breaking time of up to 50 ms must be considered in application and the circuit must be designed to ensure that an arc-breaking time of 50 ms is not exceeded.

## ■ Characteristics

## Standard Relays

Note: 1. The data shown above are initial values.
2. The contact resistance was measured with 1 A at 5 VDC using the voltage drop method.
3. The operate or release time was measured with the rated voltage imposed with any contact bounce ignored at an ambient temperature of $23^{\circ} \mathrm{C}$.
4. The insulation resistance was measured with a 500-VDC megger applied to the same places as those used for checking the dielectric strength.
5. The electrical endurance was measured at an ambient temperature of $23^{\circ} \mathrm{C}$.

Relays (Conforming to Auxiliary Power Relay Specifications)

| Item | Cased Relays |
| :---: | :---: |
| Contact resistance (See note 2.) | $50 \mathrm{~m} \Omega$ max. |
| Operate time (See note 3.) | AC: 25 ms max., DC: 50 ms max. |
| Release time (See note 3.) | 30 ms max. |
| Max. operating frequency | Mechanical: 1,800 operations $/ \mathrm{hr}$ <br> Electrical: 1,800 operations $/ \mathrm{hr}$ (under rated load) |
| Insulation resistance (See note 4.) | $100 \mathrm{M} \Omega$ min. |
| Dielectric strength | Between coil and contact: $2,000 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 minute <br> Between contacts of different polarity: $2,000 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 minute <br> Between contacts of same polarity: $1,500 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 minute |
| Vibration resistance | Destruction: 10 to 55 to $10 \mathrm{~Hz}, 0.75 \mathrm{~mm}$ single amplitude ( 1.5 mm double amplitude) Malfunction: 10 to 22 to $10 \mathrm{~Hz}, 0.5 \mathrm{~mm}$ single amplitude ( 1.0 mm double amplitude) |
| Shock resistance | Destruction: $300 \mathrm{~m} / \mathrm{s}^{2}$ Malfunction: $30 \mathrm{~m} / \mathrm{s}^{2}$ |
| Endurance | Mechanical: 5,000,000 operations min. (at 1,800 operations/hr) Electrical: 500,000 operations min. (at 1,800 operations/hr with rated load) (see note 5) |
| Error rate (level P) (Reference value) (See note 6.) | 10 mA at 5 VDC |
| Ambient temperature | Operating: $-10^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ (with no icing or condensation) |
| Ambient humidity | Operating: 5\% to 85\% |
| Weight | MM4P-JD: approx. 410 g MM4XP-JD: approx. 420 g |

Note: 1. The data shown above are initial values
2. The contact resistance was measured with 1 A at 5 VDC using the voltage drop method.
3. The operate or release time was measured with the rated voltage imposed with any contact bounce ignored at an ambient temperature of $23^{\circ} \mathrm{C}$.
4. The insulation resistance was measured with a 500-VDC megger applied to the same places as those used for checking the dielectric strength.
5. The electrical endurance was measured at an ambient temperature of $23^{\circ} \mathrm{C}$.
6. This value was measured at a switching frequency of 60 operations per minute.

## Safety Precautions

Refer to Safety Precautions for All Relays.

## - Connection

- Use proper crimp terminals or 1.2- to 2-mm-dia. single-conductor wire to connect screw terminals.
- Connect loads to DC-switching Relays so that arcs from adjacent terminals will not strike each other. E.g., connect all common terminals to the same polarity.
- Screw Terminal Model:

Do not bend the coil terminals, otherwise the coil wire may be disconnected. Make sure that the tightening torque applied to each terminal is 0.78 to $1.18 \mathrm{~N} \cdot \mathrm{~m}$ and the insertion force is 49 N for 10 s.

- Do not reverse polarity when connecting open DC-switching Relays, including 3- and 4-pole models.

## - Installation

- Do not install the Relays where iron dust can adhere to the contacts or coil. Such dust can prevent the armature from moving freely and inhibit proper electrical contact.
- Relays can generate arcs externally. Either install the Relay in a location where a nearby object will not burn or use a covered Relay.
- DC-switching Relays contain a permanent magnet in the insulation base. Do not place a magnet or magnetic object near this base. Doing so will reduce the power of the permanent magnet, thus reducing Relay capacity.
- Insert PL Back-mounting Sockets from the back of the panel.
- Separate Relays from each other by at least 20 mm when mounting multiple Relays together.

- Relays should be mounted with the armature facing down.

## - Wiring

When connecting a load to the contact terminals of a model for DC loads, consider the polarity of the contact terminals so that the generated arcs on the adjacent poles will not collide. If the common connections of the Relay are all positive or all negative, no arc collision will occur.

## MMXP

The MMXP has a hole in the Relay case to allow gas to escape. Do not use this Relay in locations subject to excessive dust.

## Contact Loads

The contact load should be greater than the power consumption of the coil. If it is less than this power consumption or if the Relay is operated very infrequently, the contact can change chemically thus causing unstable operation.

## - Soldering

When soldering solder terminals, do not let flux or other foreign matter adhere to contacts or do not let the coil terminals become bent. Also, solder as quickly as possible because excessive heat may damage the coil.

## - Diode Built into Relays

A diode is built into the Relays to absorb reverse electromotive force from the relay coil. The diode will be destroyed if a large external surge voltage is applied. If there is a possibility of a large external surge voltage being applied, take suitable measures to absorb the surge.

## Storage

A model for DC loads incorporates a permanent magnetic for arc suppression. Keep floppy disks away from the Relay, otherwise the data on the floppy disk may be damaged.

## Operating Environment

Do not use the Relay in places with flammable gas, otherwise an explosion may result due to an arc generated from the Relay

[^0]In the interest of product improvement, specifications are subject to change without notice.

## Read and Understand This Catalog

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

## Warranty and Limitations of Liability

## WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED

LIMITATIONS OF LIABILITY
OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.
IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

## Application Considerations

## SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this catalog.
Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations

Systems, machines, and equipment that could present a risk to life or property.
Please know and observe all prohibitions of use applicable to the products.
NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM

PROGRAMMABLE PRODUCTS
OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof

## Disclaimers

## CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons
It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made However, some specifications of the products may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

## DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

## PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

## ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical typographical, or proofreading errors, or omissions.
