# **Switching Power Supply**

**S82K** 

# DIN-Rail Mount Power Supply with a Wide Power Range of 3 to 240 W

- Universal voltage range: 100 to 240 VAC
- UL 508 listed on all models
- Class 2 approved on all models below 240-W, except dual-output types
- Undervoltage indicators on all.
   90-W, 100-W and 240-W T-Models have indicator and output
- Meets EN61000-3-2 (limits for harmonic current emissions) with PFC on 240-W models
- Parallel operation capability (90-W, 100-W and 240-W)
- Finger-safe terminal block with cover according to VDE0106/P100
- Approvals: UL, CSA, VDE, and CE
- 3-year warranty

	standards UL 508 (Listing)/1950 CSA C22. No.14/No.950, EN50178 (VDE0160), EN60950 CSA E.B.						8 (VDE0160), 0 s to				
	Weight	150 g max.		260 g max.	380 g max.	400 g max.	600 g m	nax.	1,800 g max.	2,200 g max.	

Note: 1. Defined with a 100% load and the rated input voltage (100 or 200 VAC).

- 2. Do not press down on the terminal block with a force exceeding 75 N while tightening the terminals.
- 3. To ensure the emission ratings, a noise filter should be used on the output lines at the closest point. (3- to 50-W models: S82Y-JF3-N, 90- and 100-W models: S82Y-JF6-N)
- 4. To ensure the Emission Enclosure rating, a ferrite ring core should be used on all cables (for S82K-P24024).
- 5. Models other than dual output models satisfy the Class-2 requirements.
- 6. To meet Class-2 requirements with the 100-W model, either a fuse or circuit breaker that is UL listed or CSA certified, and rated at 4.2 A max. should be wired in series with the load to be connected to the power supply. Only then can the power supply output be considered as meeting Class 2.

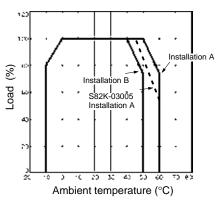

#### **■** REFERENCE VALUE

Item	Value	Definition
Reliability (MTBF)	135,000 hrs min.	MTBF stands for Mean Time Between Failures, which is calculated according to the probability of accidental device failures, and indicates reliability of devices. Therefore, it does not necessarily represent a life of the product.
Life expectancy	8 yrs. min.	The life expectancy indicates average operating hours under the ambient temperature of 40°C and a load rate of 50%. Normally this is determined by the life expectancy of the built-in aluminum electrolytic capacitor.

# **Engineering Data**

#### **■ DERATING CURVE**

#### 3-/7.5-/15-/30-/50-/90-W/ 100-W Models

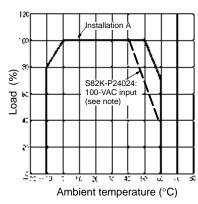

Note: When using the 7.5-W single-output models within the input voltage range between 90 and 110 VDC, the load rate will become 90% or less.

When using the 90-W model at an ambient temperature exceeding 25°C, the load rate will become 90% or less.

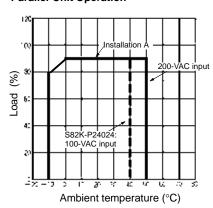

#### 240-W Model

#### **Single-Unit Operation**

Note: 100-V input: 85 to 132 VAC

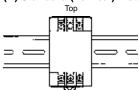

#### **Parallel-Unit Operation**

#### **Mounting Position**

The derating curve can be ensured for these two kinds of installations.

#### (A) Standard (Vertical) Installation

#### (B) Horizontal Installation

Note: Not permitted for 240-W models.

#### ■ OVERLOAD PROTECTION

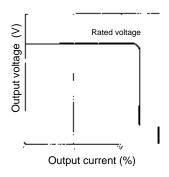

The Power Supply has an overload protection function that protects the load and the power supply from possible damage by overcurrent. When the output current rises above a set value (105% of the rated output current of most models; 101% of the rated output current for 90-W model), the protection function is triggered, decreasing the output voltage. When the output current falls within the rated range, the overload protection function is automatically cleared.

When using the 7.5-W single-output models within the input voltage range between 90 and 110 VDC, the protection function will operate at a current of 95% of the rated load current.

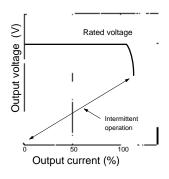

When using the 90-W model at an ambient temperature exceeding 25°C, the protection function will operate at a current of 92% of the rated load current.

Note: To avoid damage to the unit or deterioration of the internal circuitry, do not short-circuit the output terminals of the S82K or use the S82K with excessive output current for a long time.

#### 3-/7.5-/15-/90-W/100-/240-W Models

#### 30-/50-W Models

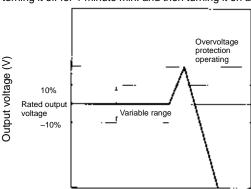

#### When Using ± Output Models

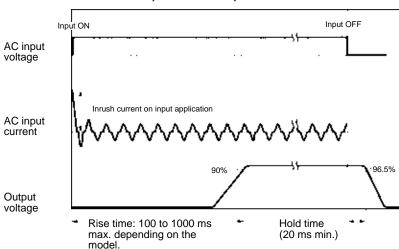

The +V output detects the total output power (+V output and -V output) to trigger the short-circuit protection against overcurrent. This protection varies depending on the -V output state. The -V output independently triggers the short-circuit protection.

#### OVERVOLTAGE PROTECTION (S82K-24024T MODELS ONLY)

The Power Supply is provided with an overvoltage protection function that protects the load and the Power Supply from possible damage by overvoltage. When the output voltage rises above a set value, the protection function is triggered, shutting off the output voltage. If this occurs, reset the Power Supply by turning it off for 1 minute min. and then turning it on again.

### **■ INRUSH CURRENT, RISE TIME, HOLD TIME**

# Operation

# ■ UNDERVOLTAGE ALARM INDICATOR AND OUTPUT FUNCTION (ALL MODELS EXCEPT S82K-24024/P24024)

If the output voltage at the output terminal drops to 75% to 90% of the rated voltage, the red indicator of the S82K (DC LOW indicator) will be lit. In the case of the S82K-10024/24024T, a voltage drop alarm will be output via the relay available in the models (DC LOW output).

This function detects the voltage at the output terminal of the Power Supply. To check the precise output voltage, measure the voltage at the terminal of the load.

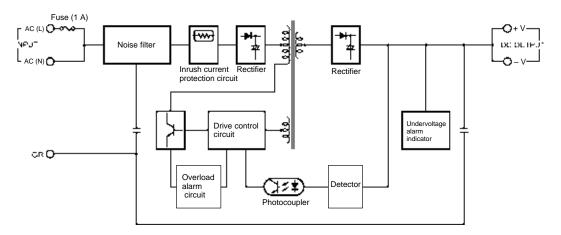

Indicato	r			Voltage	Operation of 09024/10024/24024T's output (DC LOW output) (see note 2)
Green:	×	DC ON		If the voltage at the output terminal is more than 90% of the rated voltage, the green indicator will be lit.	<u>ل</u> وما
Red:	$\circ$	DC LOW			_
Green:	×	DC ON	(see note 1)	If the voltage at the output terminal is 75% to 90%, the red indicator will be lit.	L <sub>0</sub> 0_J
Red:	lacksquare	DC LOW			
Green:	0	DC ON		If the voltage at the output terminal is 0 V, both the green and red indicators will not be lit.	<u>ل</u>
Red:	0	DC LOW			<u> </u>

Note: 1. The more the voltage at the output terminal drops, the darker both the green and red indicators will be.

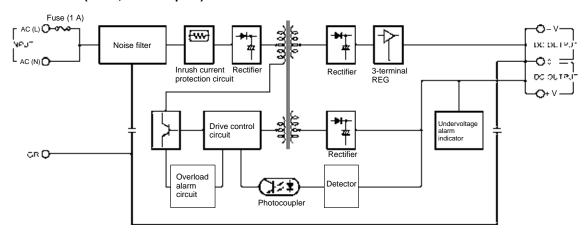

<sup>2.</sup> The relay contacts have a capacity of 0.1 A at 24 VDC.
