

E3Z

The New Standard for Compact, Long-range Photoelectric Sensors Conserves Energy and Natural Resources

- Long sensing distance of 15 m for Through-beam Models, 4 m for Retro-reflective Models, and 1 m for Diffuse-reflective Models.
- Unique algorithm minimizes external interference from inverter fluorescent lighting.
- Conserves energy and represents ongoing efforts aimed at eliminating materials containing lead.
- Provides a high degree of protection (IP67), IP67f oil resistance, mutual interference prevention, and EN standard compliance.
- Mechanical axis and optical axis offset always less than $\pm 2.5^\circ$ greatly simplifies optical axis alignment.

Be sure to read Safety Precautions on page 136.

Sensing method	Appearance	Connection method	Sensing distance	Model	
				NPN output	PNP output
Narrow-beam Reflective Refer to page 148.		Pre-wired (2 m) *3	90±30 mm	E3Z-L61 *5	E3Z-L81
		Standard M8 Connector		E3Z-L66	E3Z-L86
Retro-reflective without MSR function for clear, plastic bottles Refer to page 152.		Pre-wired (2 m) *3	500 mm (80 mm)	E3Z-B61 *5	E3Z-B81
		Standard M8 Connector		E3Z-B66	E3Z-B86
		Pre-wired (2 m) *3	2 m (500 mm)	E3Z-B62 *5	E3Z-B82
		Standard M8 Connector		E3Z-B67	E3Z-B87
Slit-type Through-beam Refer to page 156.		1 axis	25 mm	E3Z-G61 *5	E3Z-G81
		2 axes		E3Z-G62 *5	E3Z-G82
		1 axis	Pre-wired M8 Connector	E3Z-G61-M3J	E3Z-G81-M3J
		2 axes		E3Z-G62-M3J	E3Z-G82-M3J

Note: The sensing distance of Oil-resistant Retro-reflective models is different from that of standard Retro-reflective models.

*1. The Reflector is sold separately. Select the Reflector model most suited to the application.

*2. The sensing distance specified is possible when the E39-R1S used. Values in parentheses indicate the minimum required distance between the Sensor and Reflector.

*3. Models with a 0.5-m cable are available as a standard feature for products marked *3. When ordering, specify the cable length by adding the code "0.5M" to the model number (e.g., E3Z-T61 0.5M).

*4. Pre-wired M12 Connectors are available for models in the table marked *4. These models have the -M1J suffix. (Example: E3Z-T61-M1J)

*5. Press-fit e-CON Pre-wired Connectors are available with 0.3-m, 0.5-m, and 2-m cables for models in the table marked *5. The model number is E3Z-□6□-S0S□W-E□. The connector is the E-39-ECON □M with a 2-m or 5-m cable and a connector on one end or the E39-ECONW□M with a 0.5-m to 2-m cable (length increases in 0.1-m increments) and connectors at both ends. This e-CON specification is rapidly becoming the standard for FA equipment and connector manufacturers.

*6. Clamp-type e-CON Pre-wired Connectors are available with a 2-m cable. The suffix for these models is -ECON-C. (Example: E3Z-T61-ECON-C 2 M) The connectors are E-39-ECON □M with a 2-m or 5-m cable and a connector on one end or the E39-ECONW□M with a 0.5-m to 2-m cable (length increases in 0.1-m increments) and connectors at both ends. This e-CON specification is rapidly becoming the standard for FA equipment and connector manufacturers.

Accessories (Order Separately)

Slit

Slit width	Sensing distance		Minimum detectable object (typical)	Model	Contents
	E3Z-T□□	E3Z-T□□A			
0.5 mm dia.	50 mm	35 mm	0.2 mm dia.	E39-S65A	One set (contains Slits for both the Emitter and Receiver)
1 mm dia.	200 mm	150 mm	0.4 mm dia.	E39-S65B	
2 mm dia.	800 mm	550 mm	0.7 mm dia.	E39-S65C	
0.5 × 10 mm	1 m	700 mm	0.2 mm dia.	E39-S65D	
1 × 10 mm	2.2 m	1.5 m	0.5 mm dia.	E39-S65E	
2 × 10 mm	5 m	3.5 m	0.8 mm dia.	E39-S65F	

Reflectors

Name	E3Z-R Sensing distance (typical)*	Model	Quantity	Remarks
Reflector	3 m (100 mm) (rated value)	E39-R1	1	<ul style="list-style-type: none"> Retro-reflective models are not provided with Reflectors. The MSR function is enabled.
	4 m (100 mm) (rated value)	E39-R1S	1	
	5 m (100 mm)	E39-R2	1	
	2.5 m (100 mm)	E39-R9	1	
	3.5 m (100 mm)	E39-R10	1	
Fog Preventive Coating	3 m (100 mm)	E39-R1K	1	
Small Reflector	1.5 m (50 mm)	E39-R3	1	
Tape Reflector	700 mm (150 mm)	E39-RS1	1	
	1.1 m (150 mm)	E39-RS2	1	
	1.4 m (150 mm)	E39-RS3	1	

Note: 1. The actual sensing distance may be reduced to approximately 70% of the typical sensing distance when using a Reflector other than E39-R1 or E39-R1S.

2. Refer to *Reflectors* on page 295 for details.

* Values in parentheses indicates the minimum required distance between the Sensor and Reflector.

Procedure for Adjusting Cable Length (Clamp-type e-CON Pre-wired Connector)

Wire Removal Procedure

1. Use a flat-blade precision screwdriver to push the operating lever in and lock it in place. Pull out the wires.
2. Rewire immediately. If rewiring will not be performed for longer than 8 hours, be sure to release the operating lever. (See step 3 of the Wiring Procedure below.)

Cable Length Adjustment Procedure

Cut the cable to the desired length. Place the cable wire on the strip gauge located on the side of the E3Z to determine the length of exposed wire. Strip 7 to 8 mm of the covering from the wire. If the cable is stranded, give the wire several twists.

Wiring Procedure

1. Use the flat-blade precision screwdriver to check and see if the lever is locked down in the operating slot.
2. Insert the wires into the wire slots as far as they will go. Make sure the tip of the conductors have passed all the way through the terminal block.

3. Insert the screwdriver into the release slot. Push up lightly until you hear the operating lever snap back into place.

4. Perform the following items.
 - Check to see if the operating lever is back in its initial position.
 - Repeat step 2 of the Wiring Procedure above. (The wiring is correct if there is resistance when each wire is lightly pulled.)

Safety Precautions

Refer to *Warranty and Limitations of Liability* on page F-2.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons. Do not use it for such purpose.

Precautions for Correct Use

● Wiring

M8 Metal Connector

- Be sure to connect or disconnect the metal connector after turning OFF the Sensor.
- Hold the connector cover to connect or disconnect the metal connector.
- Secure the connector cover by hand. Do not use any pliers, otherwise the connector may be damaged.
- The proper tightening torque range is between 0.3 and 0.4 N·m. Be sure to tighten the connector securely, otherwise the specified degree of protection may not be maintained or the connector may be disconnected due to vibration.

● Mounting

Sensor Mounting

Use M3 screws to mount the sensor and tighten each screw to a maximum torque of 0.53 N·m.

● Oil-resistant Models

Oil Resistance

- Although the E3Z-□□□K Sensors have oil-resistant specifications, performance may be affected by certain types of oil. Refer to the following table.
- E3Z-□□□K Sensors are tested for resistance to the oils given in the following table. Refer to the information in the table when deciding which type of oil to use.

Test oil classification	JIS classification	Product name	Kinematic viscosity (mm ² /s) at 40°C	pH
Lubricant	---	Velocity No.3	2.02	
Water insoluble machining oil	Class 2, No. 5	Daphne Cut AS-30D	No less than 10 to no less than 50	---
	Class 2, No. 11	Yushiron Oil No.2 ac	Less than 10	
Water soluble machining oil	Class W1, No.1	Yushiroken EC50T-3	---	7 to 9.5
		Yushiron Lubic HWC68		7 to 9.9
	Class W1, No.2	Gryton 1700D		7 to 9.2
	Class W2, No.1	Yushironken S50N		7 to 9.8

Note: 1. The E3Z maintained a minimum insulation resistance of 100 MΩ after it was dipped in all the above oils for 240 hours.

2. When using the Sensors in environments subject to oils other than those listed above, use the figures for kinematic viscosity and pH from the table as general guidelines. Additives and other substances contained in oils may affect the E3Z. Be sure to consider this before use.
