The Next Generation of Advanced Color Sensing. For Demanding, Color-Critical Applications.

realizing

Have you heard about some of the sensor problems on your production lines?

If you listen carefully, you'll probably hear people complaining about these sensor problems.

Optical sensors and image sensors.

The general consensus on the production line is that they both have their advantages and disadvantages.

Many users hesitate to introduce a full-scale image sensor system, but at the same time, find it difficult to install and use an optical sensor system.

Now there is a sensor that answers these problems.

Not an optical sensor and not an image sensor, it's a brand new type of smart sensor.

With the increasing importance that is being placed on quality control today,

you will find this sensor to be a major help in moving your production lines forward.

Introducing the new Smart Sensor from OMRON.

Next Page

Simple to use. Detection abilities close to human vision. Smart Sensor provides the best combination of optical and image sensors.

Color or position differences are a good example.

A person can see these with a glance, but it's both costly and labor-intensive to set up a system that will allow a sensor to detect these differences.

If only there were a simpler way, something that resembled human vision...

Now there is, because we have added color capabilities to the Smart Sensor.

In addition to being able to distinguish colors, the new Smart Sensor also offers stable detection for ordinary, conventional workpieces.

It goes a long way toward answering many of the problems that today's production lines are facing.

Smart Sensor ZFV

OMRON Color Technology Provides Superior Sensing.

The original Smart Sensor was designed to be easy enough for anybody to use, and our color model shares the same characteristic. The ZFV-C Color Smart Sensor is designed with the same Target, Teach, Go simplicity as the original ZFV.

The Color Filter function is completely automatic, and colors can be easily extracted while watching the monitor.

This sensor is smart enough to handle even advanced applications.

The Automatic Color Filter function adds stability to your images.

This function increases the image contrast to make measurements more stable. There are a total of seven color filters in all. The one that obtains the most suitable contrast is automatically selected,

so there's no need to worry about color setting parameters.

Simply choose the candidate color to complete color extraction.

For items that use color extraction, you simply specify the area you want. The color components in that area are then analyzed and the extraction color candidates are automatically displayed. All you have to do is select the color to be measured. The extraction conditions for the candidate colors can also be fine-tuned if necessary. This is OMRON's unique human-machine interface for color extraction.

Actual color measurement

Inspecting for the intermixture of different-colored packages

Actual colors can be measured, and those differing from the reference color can be easily distinguished.

Simultaneous, one-touch checking of multiple colors

Inspecting for the intermixture of different cap types

candidates

Multiple colors can be extracted, so that the surface area of each color can be distinguished. $\label{eq:starses}$

Additional Special Features

Wider Field of View of 150 mm

With an FOV from 5 to 150 mm, you can inspect even large workpieces that could not be previously handled.

Narrow View Type **ZFV-SC10** FOV: 5 to 9 mm

Ultra-wide View Type **ZFV-SC150** FOV: 90 to 150 mm

Adjustable View Simple Focus Adjustment

An easy to use, manual focus adjustment on the camera eliminates the need to change the head or modify programming for different workpiece sizes.

Optimize Lighting Pattern

Intelligent Lighting ZFV-SC10/-SC50□/-SC90□

The lighting pattern can be varied to ensure a uniformly bright display even when the Sensor Head is mounted at an angle. Also, the light turns in sync with the shutter operation, for excellent stability and a long service life.

Fast Mounting

Multi-mount Bracket ZFV-SC10/-SC50□/-SC90□

Adjustment control

Mounts to either of the four Sensor Head surfaces, allowing highly flexible mounting and removal.

IP67-compliant Design ZFV-SC90W/-SC150W Washable Head

Featuring an IP67-equivalent design, these models can be completely immersed in water for washing. The entire structure, including the light source, is water resistant.

Ultra Fast for High-speed Production Lines

High-speed Random Shutter CCD

Captures images without any blur, even on high-speed lines. Even at high shutter speeds, the LED power is automatically controlled to provide crisp, clear images.

High-quality Data Transmission

Digital Interface Capability The image captured by the Sensor Head is quickly

transmitted in digital format, making it immune to noise.

2

Optional Lighting with Easy, One-touch Mounting ZFV-SC50D/-SC90D

A wide variety of optional Lighting Units are available for when the light intensity of the integrated lighting is not sufficient, or when throughbeam lighting or some other lighting method is required. Simply plug in the connector to add on.

There is also no need for a special power supply for lighting. Plus, the optional Units feature strobe lighting in sync with the Sensor Head shutter, to provide stable lighting for an extended period of time and a long service life.

Bar-type low-angle lighting ZFV-LTL04

Light source for throughbeam lighting ZFV-LTF01

Vision Amplifier with Monitor Features Versatile Functions in a Compact Body

Integrated with a 1.8-inch LCD monitor, this Amp is the same compact size as our monochrome models. It enables operation while viewing the image, so the measurement status can be checked while the line is moving. It also features USB and RS-232C interfaces for connection to a personal computer.

Selectable Display Patterns

One-touch Display Selection

Select the image display that is easiest to see from among color, monochrome, and color extraction display patterns.

Quick and Easy Operation

Switch the color image display

Re-measure

Fixed keys are allotted with various functions for easy, one-touch operation.

D

STO EXF MENU MUN

Change color extraction

Note: Button B is used for function expansion.

Japanese-English Selection

Multi Menu

The menu can be switched to Japanese or English to match the application.

High-speed Color Processing

The processing speed is approximately the same as that for monochrome, even when detecting color images with high precision.

13 ms

OMRON's image processing technologies remove the usual hesitation to use color processing due to its reduced efficiency.

The Industry's Fastest Real-time Search

An original CCD drive technology and image processing engine enable ultra-fast response by processing data as the image is being captured.

The actual image processing time thus becomes zero, making the total processing speed 13 ms maximum.

The processing speed can be further increased by limiting the image capture to only the part that is required for inspection. Processing requires 8 ms in FAST mode, and 5 ms (max. speed) in MAX mode.

Excellent Expandability Meets Even More Applications

With today's rapid pace of new product development, it is essential to select sensors that have future expandability. The Smart Sensor provides the same level of quality control as larger sensor systems, thanks to its newly enhanced application capabilities and data management and analysis.

Flexible Combinations

High-speed Digital Bus Connection

Controllers can now be directly connected to prevent delays in response. By altering the connection, multiple areas can be simultaneously processed, measurement items can be combined, and the output from two Sensor Heads can be integrated. This also provides sufficient response to future workpiece changes.

Convenient for Personal Computer Operation and Management Smart Monitor ZFV Support Software

This software allows settings and image data to be saved and loaded with a personal computer. For details on the Smart Monitor ZFV Support Software, please contact your OMRON representative.

Easy Operation Achieved by Considering the Operator's Viewpoint

In addition to offering easy basic operation, the ZFV has been designed to provide the best possible operation in a variety of situations.

It helps your quality control system evolve and become smarter by allowing machines to handle the bothersome tasks.

Handy for Maintenance

The parallel I/O status can be displayed on the monitor to simplify wiring checks, to make maintenance and system start-up faster and easier.

(6

Extend the Service Life

When not in use, the LCD backlight is automatically turned OFF. This greatly extends the service life compared with having the backlight constantly ON.

Versatile Teaching Modes

Freeze-screen Teaching

This function enables easy one-button teaching, using an image of an instantaneous event that was captured with an external trigger.

Visually Check Judgment Settings Adjustment Mode

Judgment settings are displayed in bar format, so judgment conditions can be intuitively set.

Flexible Controller Installation

Flexible installation meets the specific needs of each production line. In addition to DIN rail mounting, installation is easy in control panels.

Panel Mounting Adaptor (Purchase separately)

Workpiece-movement Teaching

The optimum lighting can be automatically selected by using an external trigger to input an image of a moving workpiece.
