440G-LZ

Description

The Guardmaster 440G-LZ is a guard-locking interlock switch for use on partial body access guards. It has a rated holding force of 1,300N. The switch functions by a locking bolt extending into the actuator preventing the opening of a guard. It has two OSSD solid-state outputs that are only enabled when the locking bolt is extended and detected as entered into the actuator. The locking bolt will only attempt to extend when the correct actuator is detected. It can be used as part of a guard locking system to achieve performance Level "e" to EN/ISO 13849-1 and certified by the TÜV as meeting EN/ISO 13849-1 performance level "e" for both position and lock monitoring.

Advanced algorithms and a bi-stable solenoid result in low energy use. Peak power only occurs when changing from unlocked to locked (or vice versa). The bi-stable drive uses minimal power and will not produce heat when either locked or unlocked. The functionality is configured to replicate a traditional power-to-release or power-to-lock device

The RFID actuators can be selected as either standard or uniquely coded. The user can select the level of actuator coding according to the foreseeable risk of tampering in accordance with the requirements of EN/ISO 14119:2013

Each switch has semiconductor OSSD safety outputs that can be connected in series with other safety components that also have OSSD solid-state outputs. On-board twin LEDs enable visual diagnostics. An auxiliary output is also included as well as a manual release.

This switch can be used in washdown applications as found in the food and beverage, pharmaceutical, and semiconductor industries because of its IP69k rating with stainless steel metal parts and a design that is hygiene compliant.

ATTENTION: With the 440G-LZ "power-to-lock" style, provisions may be required to ensure that a dangerous situation can not result from open circuit faults or power cuts.

Features

- Certified to PLe to EN/ISO 13849-1 (both for door position and lock monitoring to EN/ISO 14119)
- Solid-state design and monitored outputs
- Scalable protection with unique or standard coded RFID actuators
- High holding force of 1,300 N (Fzh)
- Energy efficient green device that only uses 2.5 W
- IP69k and hygenic design
- Power-to-release and power-to-lock versions
- Compact design optimized for ease of mounting
- Diagnostic information provided by two bright 270° LEDs
- Solid-state OSSD outputs series connectable to EN/ISO 14119:2013

Maximum length of a chain of switches 10 km (Dependent on cable/ connection/required response time)
Utilization category (IEC 60947-5-2) DC-13 24V 200 mA
Insulation voltage Ui (IEC 60947-1) 75V
Impulse withstand voltage Uimp (IEC 60947-1) 1 kV
Pollution degree (IEC 60947-1) 3
Manual (auxiliary) release Built in
Protection class (IEC 61140) Class II
Mechanical life 500,000 cycles
Outputs (Guard door closed and locked)
Safety Outputs 2 x PNP, 0.2 A max / ON (+24V DC)
Auxiliary Outputs 1 x PNP, 0.2 A max / OFF (0V DC)
Environmental
Operating temperature [C (F)] 0+55° (+14+131°)
Storage temperature [C (F)] -25+75° (-13+167°)
Operating humidity 595% relative
Enclosure ingress rating NEMA 3, 4X, 12, 13, IP66, IP67, IP69k
Shock and vibration IEC 60068-2-27 30 g, 11 ms/IEC 60068-2-6 1055 Hz
Hygienic ISO 14159:2004 and EN 1672-2005, (for that part of the machine defined as "food splash area")
Washdown Sodium Hydroxide based washdown fluids
Radio frequency / EMC IEC 60947-5-3, FCC-1(Parts 18&15), R&TTE
General
Materials ABS, locking bolt and mounting bracket 304 stainless steel
Weight switch/actuator Switch 400 g, actuator 150 g, actuator mounting bracket 60 g
Protection Type Short-circuit, current limitation, overload, reverse polarity, overvoltage (up to 60V max.), thermal shutdown/restart

Product Selection

Complete Switch (including switch body, actuator and actuator mounting bracket)

Locking Type	Actuator Type	Cat. No.		
		Connector Type		
		3 m Lead	10 m Lead	6-in. Pigtail with M12 8-Pin QD
